

Satellite Signal Desk

Hint level 1 - HOST ONLY

1. Signal

Look at the training cards that share one signal.

2. Record

Start with the status field in Call log.

3. Operator

Find the three people, the three items and the forbidden pairings.

4. Battery

Find the equal parcels and the separate loose units.

5. Channel

Find the column letters and row numbers on the grid.

6. Final

Find the starting states, dial order and pulse-card key.

Satellite Signal Desk

Hint level 2 - HOST ONLY

1. Signal

In an unordered pair, a word cannot be assigned by its left/right position. Use the overlap with another pair.

2. Record

The tag links an item to a bay; rows in separate records need not line up.

3. Operator

Each item is used once. A person ruled out of two items must have the third.

4. Battery

Remove the loose units before sharing the remaining weight among equal parcels.

5. Channel

A coordinate gives column first and row second; keep the printed coordinate order.

6. Final

Each selected vector lists turns for every dial. Several different cards can affect the same dial.

Satellite Signal Desk

Hint level 3 - HOST ONLY

1. Signal

Give each signal a different word, check every training example and only then decode the received message in its printed order.

2. Record

Keep only entries meeting every status test. Follow each printed join to the report field; do not guess from row position.

3. Operator

Place the most restricted person, remove that item from the others, then use the remaining rule. Read the target person only after checking all pairs.

4. Battery

Find one parcel from the first equation, then substitute that weight into the second equation before recording it.

5. Channel

Read the full word before using the conversion table. If the word is missing, recheck each row and column rather than choosing a similar word.

6. Final

Add one dial column at a time to its starting state, wrap around the three-state loop, then check that all five pulse cards were used.
